1. Introduction

This guide provides Customer Support Representatives (CSRs) with a structured approach to diagnosing and resolving internet connectivity issues reported by customers.

The objective is to resolve as many issues as possible during the first interaction while ensuring excellent customer satisfaction. If an issue cannot be resolved at Level-1 Support,

the representative should escalate the case according to the organization's escalation policy.

2. Purpose

The purpose of this manual is to:

- Standardize troubleshooting procedures.
 - Reduce average handling time (AHT).
 - Improve First Call Resolution (FCR).
 - Enhance customer satisfaction.
 - Ensure proper escalation when required.
-

3. Scope

This manual applies to customer complaints involving:

- No Internet Connection
 - Slow Internet Speed
 - Frequent Disconnections
 - Router Problems
 - Wi-Fi Not Detectable
 - DNS Resolution Errors
 - Network Outages
 - Packet Loss
 - High Latency
-

4. Agent Responsibilities

Every support representative should:

- Listen carefully to customer concerns.

- Verify customer identity.
 - Diagnose the issue systematically.
 - Avoid making assumptions.
 - Explain troubleshooting steps clearly.
 - Maintain professional communication.
 - Document every action taken.
 - Escalate only when necessary.
-

5. Common Internet Issues

Issue	Possible Cause
No Internet	ISP outage, router failure
Slow Speed	High network usage, signal interference
Frequent Disconnects	Loose cables, unstable signal
Router Red Light	Fiber cable issue or ISP outage
Wi-Fi Missing	Router broadcasting disabled
Unable to Open Websites	DNS configuration issue
High Ping	Network congestion
Weak Wi-Fi Signal	Distance from router

6. Customer Verification Process

Before troubleshooting, confirm:

Customer Details

- Customer Name
- Customer ID
- Registered Mobile Number

- Email Address
- Installation Address

Account Verification

Verify:

- Active Subscription
- Outstanding Bills
- Service Plan
- Previous Complaints

If the account is inactive due to unpaid bills, politely explain the situation before proceeding.

7. Standard Troubleshooting Procedure

Step 1: Understand the Issue

Ask:

- When did the issue begin?
- Is the problem constant or intermittent?
- Are all devices affected?
- Did anything change recently?

Example:

"May I know when you first noticed the connectivity issue?"

Step 2: Check Service Status

Verify:

- Area outage
- Planned maintenance
- Network alerts

If an outage exists:

- Inform the customer.
- Provide estimated restoration time.
- Apologize for the inconvenience.

Example:

"There is currently a scheduled maintenance activity in your area. Service is expected to be restored within two hours."

Step 3: Restart the Router

Guide the customer:

1. Switch OFF the router.
2. Wait for 30 seconds.
3. Switch it ON.
4. Wait until all LEDs stabilize.

Many temporary issues are resolved through a reboot.

Step 4: Inspect Physical Connections

Verify:

- Power adapter
- Fiber cable
- Ethernet cable
- WAN connection

Loose or damaged cables are a common cause of connectivity problems.

Step 5: Check Router Indicators

LED	Status	Meaning
-----	--------	---------

Power	Green	Router powered on
-------	-------	-------------------

Internet	Green	Internet connected
----------	-------	--------------------

Internet	Red	No ISP connection
----------	-----	-------------------

WLAN	Blinking	Wi-Fi active
------	----------	--------------

LOS	Red	Fiber signal lost
-----	-----	-------------------

Step 6: Test on Multiple Devices

Ask the customer to test:

- Laptop
- Mobile Phone
- Smart TV

Results:

- One device affected → Device issue
 - All devices affected → Network issue
-

Step 7: Perform Speed Test

Recommended websites:

- Fast.com
- Speedtest.net

Record:

- Download Speed
- Upload Speed
- Ping

Compare results with the subscribed internet plan.

Step 8: DNS Troubleshooting

If websites fail to load:

Suggest changing DNS servers:

Primary DNS:

8.8.8.8

Secondary DNS:

8.8.4.4

Test connectivity again.

8. Router Diagnostics

Check:

- Router overheating
- Frequent reboots
- Firmware version
- Signal strength
- Device age

Recommend replacement if hardware failure is suspected.

9. Connectivity Testing

Support agents should verify:

- ✓ IP Address Assigned
- ✓ Gateway Reachable
- ✓ DNS Resolution
- ✓ Internet Accessible
- ✓ Speed Acceptable

Document all observations.

10. Escalation Guidelines

Escalate immediately if:

- Fiber cable damaged
- Router hardware failure
- Area outage exceeds 24 hours
- Multiple customers reporting same issue
- No resolution after Level-1 troubleshooting
- Customer requests supervisor
- Business customer experiencing critical outage

Include the following in the escalation ticket:

- Customer ID
 - Contact Number
 - Issue Description
 - Troubleshooting Performed
 - Screenshots (if available)
 - Speed Test Results
 - Error Messages
-

11. Sample Customer Conversations

Scenario 1: Internet Not Working

Customer:

"My internet has stopped working since this morning."

Agent:

"I'm sorry to hear that. Let me check your service status first and then we'll perform a few troubleshooting steps together."

Scenario 2: Slow Internet

Customer:

"My internet is extremely slow."

Agent:

"I understand how frustrating that can be. May I ask how many devices are currently connected to your Wi-Fi while I check your network status?"

Scenario 3: Router Red Light

Customer:

"The internet light is red."

Agent:

"Thank you for letting me know. A red internet indicator usually means the router cannot connect to our network. Let's check the cable connections and verify if there's an outage in your area."

12. Best Practices

Always:

- Remain calm and professional.
- Use simple language.
- Confirm understanding.
- Avoid technical jargon unless necessary.
- Keep customers informed throughout troubleshooting.
- Thank customers for their patience.

Never:

- Blame the customer.
- Promise unrealistic resolution times.
- Escalate without completing basic troubleshooting.

- Leave tickets incomplete.

13. Agent Checklist

Before closing the interaction, ensure:

- ✓ Customer identity verified
- ✓ Account status checked
- ✓ Outage verified
- ✓ Router restarted
- ✓ Cable connections inspected
- ✓ Speed test completed
- ✓ Issue resolved or escalated
- ✓ Customer informed of next steps
- ✓ Ticket notes updated
