

Manual 4 – Password Reset Guide (Infosys Project)

Password Reset & Account Recovery Manual

Version

1.0

Purpose

This manual provides customer support representatives with a standardized procedure for assisting customers who experience password-related issues. It covers password reset, account recovery, identity verification, security guidelines, troubleshooting, and escalation procedures. Following these steps ensures customer accounts remain secure while providing a smooth support experience.

1. Introduction

Password-related issues are among the most common support requests received by customer service teams. Customers may forget their passwords, experience account lockouts, fail multi-factor authentication, or encounter expired reset links.

Support agents should resolve these issues efficiently while maintaining strict account security standards. Identity verification is mandatory before any password reset is performed.

2. Common Customer Issues

Support agents frequently receive the following requests:

- Forgotten password
- Incorrect password entered multiple times
- Account locked after failed login attempts
- Password reset email not received
- OTP not delivered
- Expired reset link
- Multi-factor authentication failure

- Suspicious login activity

Understanding the customer's exact issue helps determine the appropriate resolution process.

3. Customer Verification Procedure

Before making any account changes, verify customer identity.

Required Verification Details

- Registered Email Address
- Registered Mobile Number
- Customer ID
- Security Question (if configured)
- Date of Birth (if applicable)

Verification Checklist

- ✓ Customer identity verified
- ✓ Account ownership confirmed
- ✓ Contact details matched
- ✓ Security questions answered correctly

Only after successful verification should the password reset process continue.

4. Password Reset Process

Step 1

Open the Customer Management Portal.

Step 2

Search using Customer ID or Registered Email.

Step 3

Verify customer identity.

Step 4

Select **Reset Password**.

Step 5

Generate secure password reset link.

Step 6

System automatically sends the reset email.

Step 7

Inform the customer:

"A secure password reset link has been sent to your registered email address. Please use it within the next 30 minutes."

5. Password Requirements

Customers must create passwords that satisfy the following security policy.

Requirement	Value
Minimum Length	8 Characters
Uppercase Letter	Required
Lowercase Letter	Required
Number	Required
Special Character	Required

Example

Support@2026

Agents should encourage customers to avoid using names, birthdays, or commonly used passwords.

6. Troubleshooting Password Issues

Password Reset Email Not Received

Possible causes:

- Incorrect email address
- Spam folder
- Email delay

Resolution:

- Verify registered email
 - Ask customer to check Spam/Junk folder
 - Resend reset email
-

OTP Not Received

Possible causes:

- Network delay
- Incorrect mobile number
- Temporary server issue

Resolution:

- Verify registered mobile number
 - Resend OTP
 - Wait two minutes before requesting another OTP
-

Account Locked

Reason:

Too many incorrect password attempts.

Resolution:

- Unlock account
- Reset password
- Advise customer to use the new password immediately

Reset Link Expired

Resolution:

Generate a new reset link and inform the customer that links remain valid for only 30 minutes.

7. Security Best Practices

Support agents should remind customers to:

- Never share passwords with anyone
 - Enable Multi-Factor Authentication (MFA)
 - Change passwords regularly
 - Avoid using public computers
 - Use unique passwords for different accounts
 - Log out after every session
-

8. Escalation Guidelines

Escalate the issue if:

- Customer identity cannot be verified
- Suspicious login activity detected
- Multiple unauthorized login attempts
- Security breach suspected
- Customer requests security investigation

Escalation Team:

Security Operations Team

Priority:

High

9. Sample Customer Conversation

Customer

"I forgot my password and I'm unable to access my account."

Support Agent

"I understand your concern. I'll first verify your account details. After verification, I'll send you a secure password reset link to your registered email address."

Customer

"I've received the email."

Support Agent

"Great. Please click the link, create a strong password following our password policy, and let me know once you're able to log in successfully."

10. Service Level Agreement (SLA)

Activity	Target Time
Identity Verification	3 Minutes
Password Reset	2 Minutes
OTP Delivery	2 Minutes
Email Delivery	2 Minutes
Complete Resolution Under 10 Minutes	

11. Best Practices for Support Agents

- Verify customer identity before every password reset.
- Never disclose passwords over phone or email.
- Encourage customers to enable MFA.
- Document every password reset request.

- Maintain a professional and empathetic tone throughout the interaction.
-

12. Summary

A secure password reset process protects customer accounts while ensuring quick issue resolution. Support agents must follow verification procedures, adhere to security policies, and escalate suspicious cases when necessary. Consistent execution of these guidelines improves customer trust and minimizes security risks.
